

H.264 HD IRD and Processor Module

DMM-1510P Series Professional HD/SD IRD and Processor Module

As the up-to-date PBI's professional IRD and HDTV Processor of DMM1000 series, DMM-1510P succeeds all functions from DMM-1500P, and exceeds the previous generation in terms of performance & functionalities. DMM-1520P could support two AC-3 audio or down-mixed PCM audio pass-through over SDI and AES-EBU. The integrated decoder complies with MPEG-4 (AVC high profile level 4.1) and MPEG-2 (MP@ML&MP@HL) standards. Depending on the hardware configuration, DMM-1520P is able to support various optional of reception for DVB-T2/T, DVB-S2/S, DVB-C, DTMB, ATSC, ISDB-T, TS over IP, and ASI input. Equipped with two CI slots, multi-descramble could be achieved by working with professional CAM modules. The descrambled stream could be delivered to the ASI output directly, or to the built-in re-multiplexer, or to the IP Output. Meantime, the decoded video could be outputted via HDMI, SDI with embedded audio, and CVBS (down scaled) interfaces. The built-in re-multiplexer could accept transport streams from tuner, ASI input, IP input, and the descrambled stream from CI slot, and output stream could be highly customized through the user-configurable PSI/SI regenerator. The compact design and the powerful decoding ability make DMM-1520P one of the most competitive modules in DMM1000 series.
